

# Component / Architecture Diagram

One Vercel deployment serves the marketing site, the authenticated app, and the MCP endpoint — there is no separate backend service.

# Use Case Diagram

The AI Client actor represents any MCP-compatible tool authenticating with a personal API key.

# Class Diagram (Data Model)

*parentScope (string) and ContextEdge are two parallel hierarchy representations that can drift — see ARCHITECTURE.md §8.*

# Sequence Diagram — Save Context via MCP

If `should_save` is false, the AI Client receives the reason and no write occurs — the judgment step, not the endpoint, decides what is worth keeping.
